EDUCATION

University of Sydney **2024 – Expected 2028**

Degree: Bachelor of Engineering (Honours), Software Engineering

Scholarships: Dalyell Scholar, Vice Chancellor's International Scholarship

Coursework: Data Structures & Algorithms, Software Construction & Design, Systems Programming, Data Management, Security Engineering.

EXPERIENCE

Software Engineer (Part-time) **Oct 2026 – Present**

Althea Room LLC - Florida, USA *Remote*

- Built 8 API endpoints and 6 PostgreSQL tables for a backend service; integrated the company's **central authentication** system to replace development-only login with session validation.
- Introduced the Android project's **first automated CI checks** in GitHub Actions, covering builds, tests, static analysis, and security scanning; added CI and security workflows for the backend.
- Fixed **13 security findings** across 5 backend repositories and validated the changes against existing test suites.
- Coordinated a **production PostgreSQL migration** from DigitalOcean to OVH with the CTO; verified 12 tables via checksums.

PROJECTS

TalentMatch - Internship Matching Platform | *Django, JavaScript* **Sep 2026 – Nov 2026**

- Built a full-stack internship platform supporting student applications, saved roles, application tracking and personalized match scores, alongside employer tools for managing job postings and applicants.
- Deployed on **AWS EC2** behind Nginx with HTTPS and a custom domain; migrated SQLite to PostgreSQL with a least-privilege database role, and implemented real-time notifications using Django Channels, WebSockets and Redis.
- Implemented security controls: PDF upload validation, role-based access control and firewall rules (Security Groups, UFW).
- **Led a team of 5 student engineers**, running weekly meetings, Git workflows, code reviews and pull request testing.

RenoPilot - Capstone Project | *Next.js, TypeScript, Three.js, PostgreSQL* **Aug 2026 – Nov 2026**

- Implemented interactive **3D room preview**, fixtures list and cost breakdown in customer quote reports.
- Built the landing page and persistent light/dark theme for a renovation quoting platform, accepted and merged by the client.
- Wrote **148 integration tests** covering the quote flow; rotated as Technical Lead, Client Liaison, and Risk Analyst.

JobCompass - Futura Remix Hackathon 2026 | *Next.js, TypeScript, Gemini API, Redis* **Sep 2026 – Oct 2026**

- Built a tool that checks job ads against Australian student visa requirements, combining Gemini extraction with rule-based logic and quoting the ad as evidence.
- Achieved 75% overall accuracy on 20 unseen job ads with **0% false-positive rate** for ineligible visa recommendations.
- Deployed to production with analytics, Redis caching and rate limiting; **served 40 students** and 41 job-ad checks.

RAG Document Assistant | *Python, FastAPI, React, pgvector, AWS* **Aug 2026 – Oct 2026**

- Built a multilingual (English/Vietnamese) RAG backend using embeddings and cosine similarity to ground Gemini answers in PDFs; added pytest with GitHub Actions CI and deployed on AWS EC2 behind Nginx.

SKILLS

Languages: Python, Java, TypeScript/JavaScript, SQL, HTML/CSS

Frameworks: React, Next.js, FastAPI, Django, Django REST Framework, Three.js

Databases: PostgreSQL, pgvector, SQLite

Tools & Clouds: Docker, Git/GitHub, GitHub Actions, AWS EC2, Nginx, Vercel, Render, pytest, JUnit, SonarCloud
